3. The following is an examiner's statement of reasons for allowance: the cited prior arts teach music features of a song sample are extracted for the search of the song in a database of songs. The prior arts further teach uploading a portion of the sampled portion, which includes identification information of the desired song. Thus, allowing user to identify a song with just a sample of the sampled portion.

On the other hand, the Applicant teaches the single user input causes the transmitter to transmit over the initiated wireless link a message comprising the plurality of features extracted from the digital media sample, wherein the message carries insufficient information from which to reconstruct the digital media sample. The Applicant further teaches a user input mechanism for causing the processor to extract at least one feature from at least the portion that is temporarily stored in the buffer memory, wherein the feature is descriptive of an identity of a content of said media

sample. Furthermore, the Applicant teaches wherein the user input mechanism is for causing the processor to extract at least one feature from the first digital media sample when the displayed symbol is selected by a user of the mobile station, and from the second digital media sample when no displayed symbol is selected by the user. These limitations, in conjunction with all limitations of the independent claims have not been disclosed, taught, or made obvious over the prior art of record.
